

Leverage Your Technology to Drive Better Business Outcomes

Strong Services DNA Means Faster Value Realization

As technology advances, Avnet is continually evolving its services so you can infuse a unique approach to solve a broader set of business problems.

Big Data & Analytics – unify, maintain, manage and improve access to critical business data to derive intelligent insights. Let us help you unlock the value of your data to accelerate informed decision making.

Cloud Solutions – realize the promise of cloud computing while readying your infrastructure for the software-defined datacenter. From capacity challenges to complex data center automation initiatives, we offer practical private, hybrid and public cloud solutions that meet your evolving business challenges.

Digital Services – create a true omnichannel customer experience that includes digital strategies and solutions that span the buyer’s journey regardless of device and platform. With the right technology on the back end and expert implementation on the front end, we can help you create stronger relationships with your customers and build better brand loyalty.

IT Operations & Management – enable IT design, planning, building and management to improve efficiencies, performance and cost savings. Introduce automation & orchestration to existing infrastructures to reduce manual processes and cost, while laying the foundation for datacenter transformation.

Education Services – tap in to strategic training, curriculum development and unique blended learning programs for global, mobile organizations to meet specific content and student needs and develop a more knowledgeable staff.

Enterprise Applications – maximize effectiveness of your core enterprise applications by enhancing capabilities, optimizing performance, and capturing long-term benefits from your investments in software applications through high-impact enterprise applications.

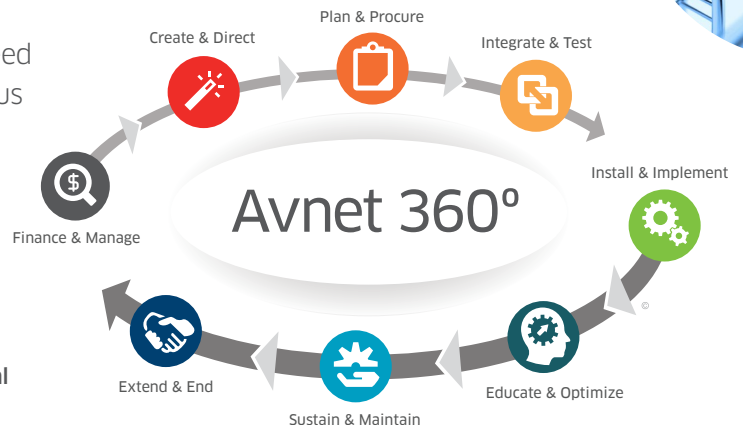

IT Lifecycle Asset Management – Get maximum benefit and value from your technology investments. We provide the flexibility, efficiency, competitive advantage and risk mitigation you need from design to maturity, to support and asset repair, through end-of-life support.

Security – secure data from mobile and cloud, as well as devices and endpoints throughout your entire organization. Let us guide you on the most cost-effective, secure, compliant, and agile security framework based specifically on your needs.

Technology is changing the business world

Technology advancements and increased pressure on speed of data delivery and consumption are pressuring the status quo of how to do business in today’s global world.

Avnet can help you adapt – or even transform your business – by working with you to optimize your technology investments and extend your business capabilities. Our 360 degree coverage of the IT technology lifecycle leverages distinct services and capabilities to provide the best possible business outcomes so you can: **reduce complexity, streamline business operations, increase operational efficiency, gain timely access to data and improve speed of delivery.**

Guiding You Through the Technology Experience

We can help you evaluate, architect, implement, understand, use and maintain your technology investments. From planning and development to delivery and asset disposition, we help you identify and combine the right mix of services and technology to solve your most complex problems. The result - measurable business outcomes that accelerate your success.

Leveraging a unique, one-of-a-kind portfolio and deep technical expertise, Avnet can help optimize your technology investment at any stage of the IT lifecycle - giving you a true competitive advantage.

Leverage the Avnet Ecosystem
